

Does it Exist?

Conduct research to make sure that your invention does not already exist. It is okay if you are able to find products that are similar, but you will not be able to put your product on the market as a new invention if it has already been produced and patented.

I found a similar product!

Name of Product: _____

Where is the product sold? _____

What makes your invention different? _____

If your invention is exactly the same as this product you will need to think of a way to modify the existing product so that you are not infringing on a patent.

If you can not think of any modifications, you will need to think of a new invention.
